

Vinay K R

Full Stack Developer | Angular · React · Node.js/Express · Go · TypeScript

+91-7975893210 | vinayravindranatha@gmail.com | linkedin.com/in/vinay-k-r-a6bb51243 | github.com/vi-nayKR

Summary

- Full Stack Developer with 3+ years of experience building production-grade web applications and APIs across FinTech, Web3 custody, and casino gaming domains. Equally comfortable building Angular and React frontends as designing Go and Node.js/Express backend services.
- Strong expertise in Angular, React, Node.js, Go, and TypeScript, with hands-on experience in RESTful API design, RBAC auth systems, database optimisation, and cloud-native infrastructure using Docker, GitHub Actions CI/CD, and Cloudflare Tunnel.

Education

Siddaganga Institute of Technology

Bachelor of Engineering in Computer Science · CGPA: 8.65

Tumakuru, Karnataka

July 2019 – July 2023

Experience

Liminal Custody

November 2025 – March 2026

Software Engineer – Full Stack, Bengaluru

- Engineered a high-performance firewall policy management system using Node.js/Express and TypeScript, designing 15+ RESTful APIs with atomic bulk operations and TypeORM transaction rollback to ensure zero data corruption during concurrent rule updates.
- Designed a multi-tenant RBAC system integrating Auth0 with custom Node.js middleware, implementing 2FA step-up authentication flows with cryptographic signature validation and nonce-based replay attack prevention for high-value custody endpoints.
- Implemented a Redis-based caching layer for cross-chain swap quotes, reducing redundant external API calls and enforcing strict user-ownership and quote-expiry validation.
- Built 3 Angular modules (Transaction Risk, Travel Rule, Transfer Policy) with RxJS state management, cascading dropdown controls, and beforeunload guards to prevent configuration data loss.

Light & Wonder (Scientific Games)

March 2023 – July 2025

Full Stack Developer, Bengaluru

- Built RESTful Web APIs in ASP.NET Core / C# for a financial transaction system (Cage-Credit), covering bank account management, voucher redemption, denomination exchange, and check cashing for high-reliability casino operations.
- Developed Angular frontend modules for the Engage player management platform; optimised complex SQL Server stored procedures and refactored REST API payloads, reducing onboarding workflow load times by approximately 20%.
- Engineered an AI-driven error logging and debugging tool (React + .NET Core + LLM API) that centralised frontend crash reports and backend telemetry, reducing bug resolution time by ~30% across distributed agile teams.
- Authored and maintained 750+ end-to-end Cypress automated test cases, reducing manual UI testing effort by 50% and significantly decreasing critical production defects across agile release cycles.

Projects

Medha API – Backend for Mobile App | Go, Chi, PostgreSQL/PostGIS, Redis, MinIO, Docker, GitHub Actions

- Building a production-grade REST API from scratch in Go (Chi router) for the Medha mobile app, implementing OTP auth via Message Central, Google OAuth, Apple Sign-In, and JWT-based session management.
- Deployed a fully Dockerised multi-service stack (PostgreSQL/PostGIS, Redis, MinIO) on a hardened Ubuntu VPS with Cloudflare Tunnel routing, environment-separated configs, and automated GitHub Actions CI/CD pipelines with manual approval gates for production deploys.
- Database layer: pgx/v5 with goose migrations, PostGIS for geo-aware queries; Redis for session caching and OTP throttling; MinIO for object storage.

Technical Skills

Frontend : Angular, RxJS, React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS

Backend & APIs : Go (Chi), Node.js, Express.js, ASP.NET Core / C#, REST API Design, Microservices, pgx/v5, TypeORM, goose

Auth & Security : Auth0 / OAuth2, RBAC, JWT, 2FA, Cryptographic Signatures, Nonce Replay Prevention

Databases & Cache : PostgreSQL (PostGIS), SQL Server, MySQL, Redis, MongoDB, MinIO

DevOps & Cloud : Docker, Docker Compose, GitHub Actions (CI/CD), Cloudflare Tunnel, Nginx, AWS (EC2, S3), UFW

Testing & Quality : Cypress (E2E), Unit & Integration Testing, Swagger / OpenAPI

Web3 : EVM Transaction Building, LiFi Protocol, Cross-chain Swaps (Ethereum, Polygon, BSC, Base)
